Today, we want everything fast. Be it fast cars, fast cash, or fast food. We do not like to wait and watch. That is the reason why the Internet has become so much popular among all generations. We use it for watching videos, playing games or just connecting with friends. The Internet is also useful as an education medium. Any information that we may need is available on the Internet. Students especially use it for making reports, research and for general studies. But what's the use of having Internet connection if there is no computer to access it. Granted, we can use the PC at home. But we cannot carry it around wherever we want. That is why; there arose the need to have something small, light and portable, which could also help us to use the Internet. The answer to that is cheapest netbooks.

The popularity of netbooks is the greatest among students for a number of reasons. Go to any netbook review site and you will find a number of netbooks available for students. The screen is not more than 10 inch high and are very light in weight. Most weigh at the most 2 to 3 pounds. That is why; they can be carried around even in a small bag all day long without tiring yourself out. Read any netbook reviews and they will all point to the advantage of the netbook being very portable. It is small in size and very compact. So you can take it almost everywhere with you and stay connected. It also allows you to access the Internet anywhere you want.

A netbook review site will also list sturdiness and strength as being a great feature of the netbook. They are not delicate, so if you happen to knock it somewhere, it would still work fine. Students are generally careless and fun loving and accidents have a habit of taking place with a group of students around. Hence, netbooks offer the best solution for them.

Netbook reviews also point out the fact that netbooks score over standard laptops by having longer battery life. This works out better since there is no need to keep recharging the battery. The students may not always get the chance to charge their netbooks. So it is always advisable to carry something that has a long lasting battery.

Most netbooks have at least 1GB RAM and Intel processors. Some even have solid state hard drives. This makes them sturdier and less prone to damage. Their operating systems are the latest ones to hit the market like Windows Vista. They also have around 30 to 60 GB hard drives with some even having 160 GB storage capacities. There are many other quality features that you can get acquainted with on the netbook review site.

A netbook price comparison with laptops is what turns the tide in its favour. Most students do not earn any income. So they prefer having cheap netbooks rather than spend on expensive laptops. If you do a netbook price tracking, you will find that most are priced around 180 to 250 pounds. So many students can afford to own one.

All these features and many more ensure that netbooks remain the favourite choice among all students.
